

Train with Bug-O to improve your cutting and welding!

Why Bug-O?

Learn from our experience:

Here at Bug-O, we know a thing or two about welding and cutting. One of our first systems was designed to increase production rates of landing craft during World War II. Since this beginning, we have visited well over 400 end users around the world. We have learned a lot about welding and cutting, and we want to share this knowledge with you to improve your productivity and quality of work.

The welder is the most important part of the process:

When we consult with a customer we want our Bug-O Systems to improve your welding. We are able to do this by controlling the rate of travel and the tool path of your process equipment. This allows us to optimize results.

We strive to improve your quality:

Since Bug-O can do a whole run without any starts or stops, your work quality improves. We can make work processes faster and more consistent. We also know that since Bug-O can regulate heat input in an application, distortion is reduced and quality improves.

Bug-O creates a better work environment:

Our systems are set up to work in your work environment. This allows the welder to take the system to the work. We do all of this to put the welder in a position to make sure that every inch of a cut or a weld is exactly what it is supposed to be.

End User Instruction at the Herbert E. Cable Training Center

A 1-1.5 day product specific training at our HEC Training Center designed for an end-user to teach them how to use a specific piece of BUG-O equipment. We are currently scheduling training sessions for 2023 in our HEC training facility located in Canonsburg, PA.

“Send and Show” Application Solutions

The name says it all. Send us a few samples of the work that you are trying to do. We will analyze the process and test options. Once we reach the optimum solution, we will arrange an in-person demonstration or webinar to show you our solution. We will also provide you with documentation of the productivity and results that are expected.

Virtual Product Training

This is a remote training session for an end user to familiarize them with a specific BUG-O product. We will set up the machine in our HEC Training Center with a video conference call. This requires video capabilities for the end user so that our experts can work in tandem with them through the training process on their equipment.

E-mail: training@bugo.com to get started.

Our Promise

Within 5 days of receiving material, we will update you on the status.

Within 10 days of receiving material, we will have a webinar scheduled.
